

# SOTA

## COMPANY PROFILE

Sota Glazing Inc. was founded in 1989 by Juan Speck and Victor Boutin, who remain in management today. The Toronto based company has become established as a major supplier of pre-glazed unitized curtainwall through innovative design and target marketing. The extensive network of local partners and regional sales agents both in North America and overseas has allowed the company to enjoy steady growth and market expansion domestically, in the Far East and the United Kingdom.

Sota Glazing Inc. specializes in the manufacture of unitized, pre-glazed curtain walls using the screen principle. A full range of proprietary standard systems is available, and with the assistance of in-house designers, custom applications can also be supplied. Sota systems have been tested for windload, air infiltration, static and dynamic water infiltration and seismic drift.

A dynamic international group, Sota is dedicated to the specialist design, procurement and installation of curtainwall systems for industrial, commercial and public buildings. The superiority of our pre-glazed, unitized curtainwall design has created significant improvement in the overall building envelopes. Control in the shop of the glazing and sealing of curtainwall has always been the system. Advance detailing of interface conditions guarantees a smooth transition from the building structure and perimeter conditions.

### Management Staff

Management continually builds on past successes in an effort to improve productivity, cost effectiveness. Innovative thinking and a flexible approach to traditional problems has enabled SOTA to succeed worldwide including non-traditional markets.

Senior members of the management team are accountable and accomplished in their careers. Their expertise along with the corporate ideology of achievement works well for clients, projects are embraced with total commitment and enthusiasm.

The capacity of SOTA Glazing Inc. to move materials effectively has come through their experience with inspection and shipping procedures. Pre-glazed unitized curtainwall panels are regularly shipped from our North American facility to various destinations in South East Asia in configurations that prevent any structural or cosmetic damage. Thorough knowledge of shipping procedures allows SOTA to avert any delays common to many overseas projects.
